

HOW TO CUT CHAIN LINK FENCE

Step by step Guide

What You'll Need:

- Mini Bolt Cutter
- Measuring Tape
- Marker
- Chain Link Fence

METHOD A - STEP 1

Chain link has a woven construction so to make sure you follow the same strand when cutting, it's best to mark it from bottom to top. Use a marker and follow the strand of wire that you'd like to cut.

METHOD A - STEP 2

Grab a mini bolt cutter and cut the marked strand from bottom to top. Make sure you follow the strand of wire which is marked so you get a straight line.

METHOD A - STEP 3

Remove the small offcuts of wire that are weaved in the intact piece of chain link.

METHOD A - STEP 4

After you're done removing the offcuts, pull the separated section away from the rest of the roll.

METHOD B - STEP 1

To make sure you follow the same strand when unhooking the ends, mark along the length of the strand where you'd like your first section to end.

METHOD B - STEP 2

Use a plier to unhook the top and bottom ends of the strand you just marked. Straighten the wire's ends so you can untwist it through the links easily.

METHOD B - STEP 3

Start untwisting the strand while pulling it towards you. Work with a partner as you need the extra hands to unweave the strand.

METHOD B - STEP 4

If you unwove the strand of wire all the way, you'll automatically have two clean sections of chain link so you just need to separate them by pulling them apart.
