DIY CAT PROOF FENCE

Step by step Guide

What You'll Need:

- Drill
- Bolts and Nuts
- Socket Wrench Screwdriver
- Cable Tie Cutter
- Tape Measure
- Cable Ties
- Cat Proof Netting
- Brackets

STEP 1

Count how many brackets you'll need. The amount of brackets should be equal with the amount of posts you have. We used 30*30 cm brackets with a 90° angle.

STEP 2

Spray paint the brackets in order to blend them in.

STEP 3

Measure each side of the fence in order to know how much mesh you'll need.

STEP 4

Cut a separate piece of mesh for each side of the fence as you're going to apply them separately to each side and will connect the corners later together.

STEP 5

Drill holes in the posts in order to attach the brackets to it.

STEP 6

Attach the brackets to the post with bolts and nuts.

STEP 7

Use a socket wrench screwdriver to make sure the bracket is secured tightly to the post.

STEP 8

Start to attach the netting to the brackets with cable ties.

STEP 9

Secure the netting to the existing fence with cable ties. If you have a wooden fence use a staple gun to attach the netting to the fence.

STEP 10

Leave a 5-10 cm hang. If the mesh is more wobbly the cat won't be able to climb on the mesh.

STEP 11

To have a neat and secure result attach the corner bracket at a 45° angle compared to the rest of the brackets. Join the ends of the pieces of mesh together in the corner.

STEP 12

Now that your DIY cat fence is ready your cat can enjoy a safe time out in the fresh air.
