HOW TO CREATE A GABION PLANTER
Using a Plant Pot

THINGS YOU'LL NEED

- [Gabions](#)
- [Gabion Stone](#)
- [Helicals](#)/[Tying wire](#)
- Gloves
- Bolt Cutter / Angle Grinder
- Plant Container

INSTRUCTIONS

Step 1: Cut Out The Lid

Measure the diameter of your pot and use bolt cutters or an angle grinder to cut a hole on the lid.

The hole should be big enough so the container fits through it.

Step 2: Start Filling The Gabion

Depending on the height of your plant pot, start filling your gabion with stone.

Step 3: Add The Container

Place a container on top of the stones.

The container should have its top more or less in line with the top of the gabion.

If not, place more stones beneath it, until they are level.

Step 4: Fill It Up

Fill up the gabion around the plant container, until you reach the top of the basket.

Step 5: Close The Lid

Close down the lid while carefully guiding the plant through the pre-cut hole.

Step 6: Planter Ready

Secure the lid panel and your gabion planter should be ready.
