

DIY LAMP SHADE

With Wire Mesh

What You'll Need:

- Protective Gloves
- Plier
- Wire Cutter
- Welded Wire Mesh
- Old Lamp
- Black Paint

1 Prepare your supplies

Gather everything you need for the project.

2 Disassemble the lamp

Take out your lamp shade and put aside the rest of your lamp.

3 Measure the mesh

Before you remove your lamp shade, you should wrap the wire mesh around it, to measure how much mesh you will need. Make sure to wrap it tightly.

4 Cut to Size

Once secured, you will see how much of the mesh needs to be cut. Cut the mesh to size using wire cutters.

5 Remove the fabric

Use pliers to remove the lamp's shade and any additional fabric. Take the two wire hoops and discard the rest of the fabric.

6 Secure the Ends of the Mesh

Use pliers to wrap the ends of the mesh tightly around the hoops. Repeat this on both the top and bottom of the lamp shade.

7 Paint the Shade

Once everything is secured, use spray paint to paint over the wire mesh lamp shade. Put it aside to dry.

8 Assemble your Lamp

Reassemble your lamp with the new DIY lamp shade you created. Put it on your nightstand and enjoy!
