

DIY CLOCHE

With Chicken Wire

What You'll Need:

- Protective Gloves
- Pliers
- Wire Cutters
- Glue Gun
- Chicken Wire
- Door Knob
- Artificial Flowers
- Bow

1 Cut your chicken wire

Firstly, cut a piece of chicken wire mesh, depending on the desired size.

2 Shape a cylinder

Turn the mesh in the oriented direction, in a way that the holes to be taller than they are wide (this will make easier to shape the top). Form the mesh into a cylinder shape.

3 Twist wires together

Next, attach the mesh together in the middle and twist the edges using pliers.

4 Form a dome

Gently squeeze the mesh holes towards the center to help bring the ends closer together and create a dome shape.

5 Twist the top

Twist the edges of the dome using pliers.

6 Attach door knob

Finally, attach a doorknob or other decorative accent to the top with the help of a glue gun.

7 Finished cloche

Your DIY chicken wire garden cloche is now ready to protect your plants from pests and harsh weather!
