DIY GABION FIRE PIT

What You'll Need:
- Protective Gloves
- Bolt Cutter
- Angle Grinder
- Gabion Baskets
- Helical Corner Kit
- Gabion Stones
- Fire Pit Bowl

1 Unfold the Gabion

Unfold the gabion to its full size, ensuring all sides are properly expanded and ready for assembly.

2 Cut the helicals to size

Measure the gabion panels and cut the helicals to fit accordingly.

3 Attach the corners

Fold the panels upward from the base and secure them by twisting the helicals into place, make sure they encompass the corners of both panels. Repeat this process for all panels while leaving the lid open.
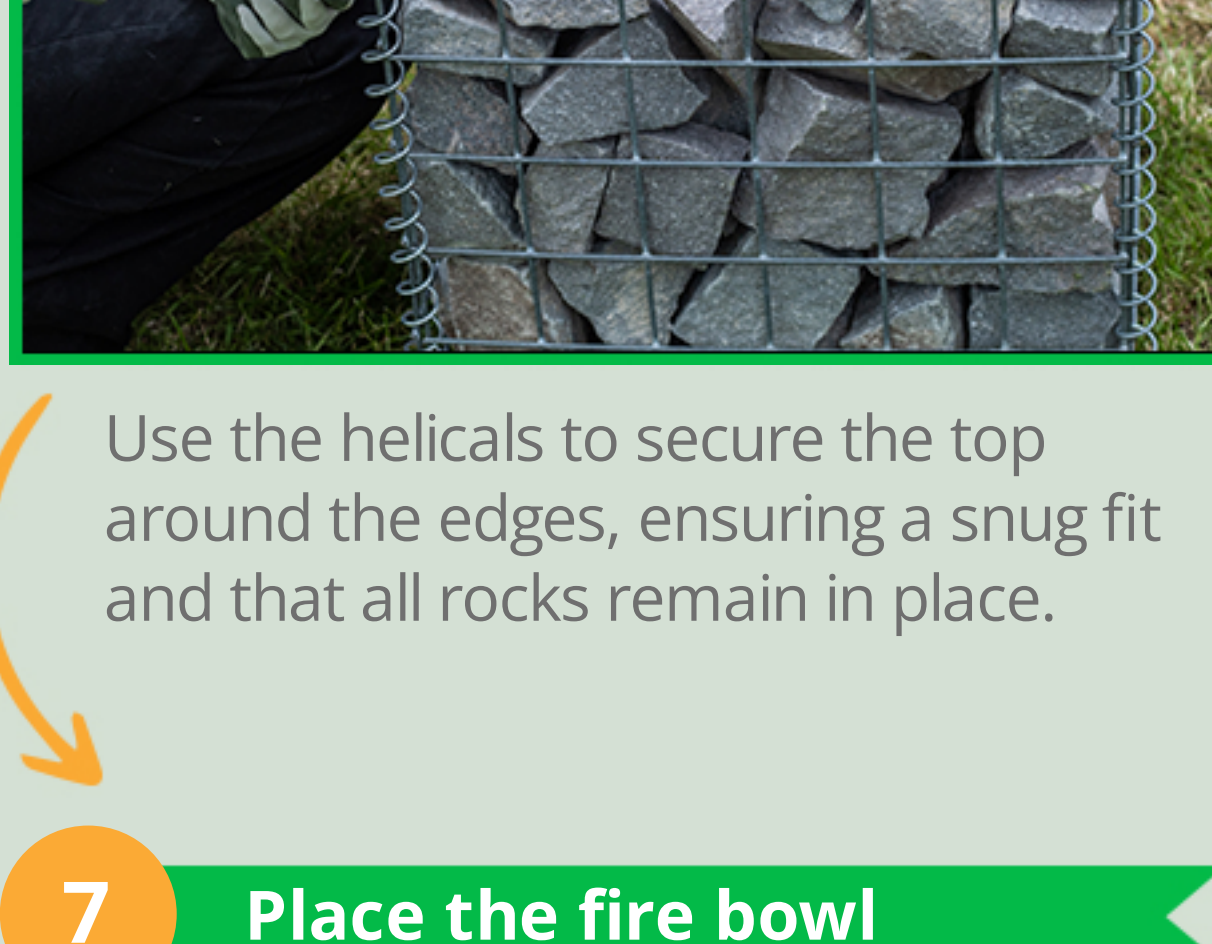

4 Cut out the lid

Cut out the lid to match the size of your bowl.

5 Fill in the gabion with stone

Carefully fill the basket with large, durable, non-degradable rocks that are larger than the mesh aperture.
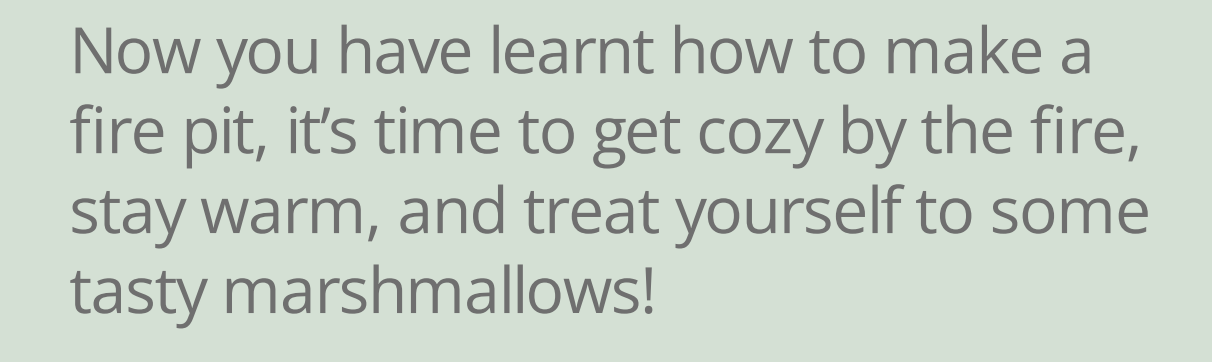

6 Close the lid

Use the helicals to secure the top around the edges, ensuring a snug fit and that all rocks remain in place.

7 Place the fire bowl

Place the fire bowl onto the cut lid panel. You may need to adjust some rocks to achieve a perfect fit; a hammer can be used for this purpose.

8 Enjoy your gabion fire pit

Now you have learnt how to make a fire pit, it's time to get cozy by the fire, stay warm, and treat yourself to some tasty marshmallows!
