HOW TO USE CABLE TIES
## To Attach Fencing

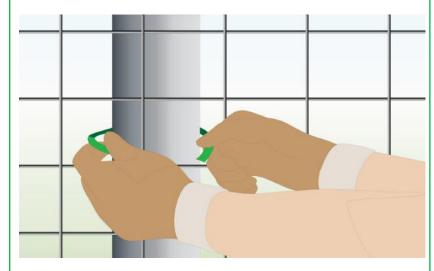

THINGS YOU'LL NEED

- Cable ties
- Scissors or wire cutters
- Protective gloves (optional)

WireFence

Step 1: Insert the Cable Tie

Grab a cable tie and weave it through the gaps or around the mesh of the fencing, connecting it to the supporting structure. Ensure the tie is positioned to firmly secure the fencing in its place.

### Step 2: Tighten the Cable Tie

Pull the ends of the cable tie tightly to secure the fencing. Make sure it's snug but not too tight to damage either the fencing or the support structure.

Step 3: Trim Excess Tie (Optional)

Once the cable tie is securely tightened, use scissors or wire cutters to trim off any surplus length of the tie. Be careful to avoid cutting the fencing or leaving behind any sharp edges.

Step 4: Check for Stability

After attaching all the fencing, double-check its stability. Give the fencing a gentle shake or push to ensure they're securely fastened.
